McGinnis Ferry Road @ Chattahoochee River

**DATE:** April 16, 2009

FROM:

Ronald E. Wishon, State Project Review Engineer

TO:

Brent A. Story, P.E., State Road Design Engineer Attention: Brad McManus, Project Manager

### SUBJECT: IMPLEMENTATION OF VALUE ENGINEERING STUDY ALTERNATIVES

Recommendations for implementation of Value Engineering Study Alternatives are indicated in the table below. Incorporate alternatives recommended for implementation to the extent reasonable in the design of the project.

ALT No.	Description	Savings PW & LCC	Implement	Comments
		BRIDGE	2	
<b>A</b> -4	Reduce the length of Span 1 to 71-feet by replacing the 2:1 Enroll with a Wall End Bent.	\$174,630	No	The projected cost savings may not actually be totally realized just by shortening the bridge. There would be increased costs due to more wall area, coping, traffic barrier and redesign.  Any redesign would delay the June 16, 2009 Let date.
		ROADWA	AY	
B-2	Reduce lane widths from 12-feet to 11-feet. Note: This alternate is linked to Alternate E-4.	\$298,197	No	The traffic on this road is 57,600 ADT for the design year. This facility will be near capacity during the design year and any decrease in lane width will cause delays.

STP00-2546-00(004), Forsyth, Fulton, Gwinnett

P. I. No.: 742920

VE Study Implementation

Page 2.

	R	OADWAY - C	ontinued	
C-1	Lower the profile to reduce the amount of Fill from STA. 423+00 to 439+00.	\$44,649	No	The designed profile was set to provide an improvement of the existing profile. It was raised in the area at the bridge to provide clearance for the proposed Multi-Use Trail under the bridge. This Multi-Use Trail is a mitigation effort by the Department for taking National Park Service property. The plans have been designed and there would be redesign cost that include all plan sheets as well as drainage redesign and recalculation of quantities. In addition, the proposed Management Let Date of June 19, 2009 does not allow adequate time for a redesign. Any shift in Let date will cause user delays.
E-4	Reduce the amount of Graded Aggregate Base (GAB) by reducing the lane widths from 12-feet to 11-feet. Note: This alternate is linked to Alt.B-2.	\$21,020	No	Please see Response for Alternative B-2.
F-1	Eliminate the use of foundation backfill material in the embankment.	\$272,160	No	Type II Foundation Backfill Material is necessary to provide stability of the sub- grade in the case that the bottom of the excavation is wet and unstable. In addition the Granular Material required for Granular Embankment is recommended in the Coastal Area and this project is located in the Piedmont Area and not easily available. OMR concurred with this assessment.

STP00-2546-00(004), Forsyth, Fulton, Gwinnett P. I. No.: 742920 VE Study Implementation

Page 3.

	I	ROADWAY Co	ntinued	
F-2	Replace Foundation Backfill with Granular Embankment.	\$191,160	No	Type II Foundation Backfill Material is necessary to provide stability of the sub- grade in the case that the bottom of the excavation is wet and unstable. In addition the Granular Material required for Granular Embankment is recommended in the Coastal Area and this project is located in the Piedmont Area and not easily available. OMR concurred with this assessment.
I-2	Reduce 20-foot raised median to a 16-foot raised median.	\$58,346	No	This project completes the widening of McGinnis Ferry Road up to Peachtree Industrial Blvd. for a distance of 0.7 miles. Implementation of this recommendation would alter the consistency of the corridor for this short stretch by introducing a lane transition in an otherwise symmetrical design plus the cost effectiveness of adding lanes in the future (57,600 ADT in Design Year). Right of Way has already been acquired on the north side of the road, minimizing potential RW savings. The plans have been designed and there would be redesign cost that includes all plan sheets as well as bridge and drainage redesign and
M-1	Replace Concrete Side Barrier (Wall No. 2), with MSE Wall.	\$62,752	No	recalculation of quantities.  The VE team did not add coping at the top of the MSE wall which will be required.  This adds \$250/linear foot thereby raising the cost of the wall above that of the Type 2C Side Barrier shown in the plans.

STP00-2546-00(004), Forsyth, Fulton, Gwinnett

P. I. No.: 742920

VE Study Implementation

Page 4.

	I	ROADWAY Co	ntinued	
M-2	Use Wall End Bent on Bent No. 1 (see recommendation A-4).	\$104,500	No	Please see Response for Alternative A-4.
O-3	Replace Concrete Side Barrier (Wall No. 3), with MSE Wall.	\$40,000	No	This wall runs 12' high for roughly 100 feet with the bottom elevation and top elevation changing often. This means that special forms need to be made for the bottom and top thereby raising the cost and eliminating the savings of \$40,000. In addition to this the cost of redesign would also add a few thousand dollars.

The Office of Engineering Services concurs with the Project Manager's responses.

### SUBJECT V.E. STUDY RESPONSES

A Value Engineering Study was held for project STP00-2564-00(004) from January 26<sup>th</sup> through the 30<sup>th</sup> of 2009. Attached are the recommendations of the Study Team from the VE Report, dated February 18, 2009, as well as the Office of Road Design's responses regarding their implementation. Due to the current Management Let Date for this project of June 19, 2009, it is requested that an Implementation Meeting be scheduled as soon as possible in order to discuss the Department's decisions regarding those recommendations so that the implementation can be included into the project plans.

Should you have any questions or need any additional information, please contact Brad McManus at (404)631-1630 or via email @ bmcmanus@dot.ga.gov.

### Road Design's Responses to VE Study Report Recommendations

GDOT Project No: STP00-2564-00(004)

### Forsyth, Fulton & Gwinnett Counties

PI No. 742920-

Alternative -A-4

Description: To shorten the Bridge

Cost savings: \$174,000

**Response:** The projected cost savings may not actually be totally realized just by shortening the bridge. There would be an increase in wall area and costs as well as cost in coping and traffic barrier. The bridge has been designed and any redesign would mean delays in the Letting of the project (Management Let Date of June 16, 2009) which would relate to a substantial increase in the user cost as well as the engineering cost to redesign.

The recommendation of the Road Design Office is: Not to implement this recommendation.

Alternative B-2

Description: Reduce Lane width from 12 feet to 11 feet

Cost Savings: \$298,197

**Response:** The traffic on this road is 57,600 ADT for the design year. This facility will be near capacity during the design year and any decrease in lane width will cause delays. The B/C Ratio for this project is 3.96 with a total Congestion benefit of approximately \$44,000,000. Also any redesign would mean delays in the Letting of the project (Management Let Date of June 16, 2009) which would relate to a substantial increase in the user cost as well as the engineering cost to redesign.

The recommendation of the Road Design Office is: Not to implement this recommendation.

### Alternative C-1

Description: To Adjust Profile for Grading

Cost Savings: \$44,649

**Response:** The designed profile was set to provide an improvement of the existing profile. It was raised in the area at the bridge to provide clearance for the proposed Multi-Use Trail under the bridge. This Multi-Use Trail is a mitigation effort by the Department for taking National Park Service property. The plans have been designed and there would be redesign cost that include all plan sheets as well as drainage redesign and recalculation of quantities. In addition, the proposed Management Let Date of June 19, 2009 does not allow adequate time for a redesign. Any shift in Let date will cause user delays.

The recommendation of the Road Design Office is: Not to implement this recommendation.

### Alternative E-4

**Description:** To reduce the amount of GAB by going from 12 feet to 11 foot lanes.

Cost Savings: \$21,020

**Response:** Please see Response under Alternative B-2.

The recommendation of the Road Design Office is: Not to implement this recommendation.

### Alternative F-1

**Description:** To Eliminate the Use (Bid Cost) of Foundation Backfill Material.

**Cost Savings:** \$272,160

Response: Type II Foundation Backfill Material is necessary to provide stability of the subgrade in the case that the bottom of the excavation is wet and unstable. In addition the Granular Material required for Granular Embankment is recommended in the Coastal Area and this project is located in the Piedmont Area and not easily available. OMR concurred with this assessment. Plan note concerning placement of Type II Foundation Backfill Material in wet areas will be revised to eliminate the phrase "it is recommended that" to make the replacement with drier soils mandatory. Based on GDOT Construction Specification 210.4.C, the quantities for Type II Foundation Backfill will be paid for under the pay item Grading Complete.

The recommendation of the Road Design Office is: Not to implement this recommendation.

### Alternative F-2

Description: Replace Foundation Backfill Material with Granular Embankment.

**Cost Savings:** \$191,160

**Response:** Type II Foundation Backfill Material is necessary to provide stability of the subgrade in the case that the bottom of the excavation is wet and unstable. In addition the Granular Material required for Granular Embankment is recommended in the Coastal Area and this project is located in the Piedmont Area and not easily available. OMR concurred with this assessment.

The recommendation of the Road Design Office is: Not to implement this recommendation.

### Alternative I-2

**Description:** Reduce 20 ft Raised Median to 16 ft Raised Median

Cost Savings: \$58,346

Response: This project completes the widening of McGinnis Ferry Road up to Peachtree Industrial Blvd. for a distance of 0.7 miles. Implementation of this recommendation would alter the consistency of the corridor for this short stretch by introducing a lane transition in an otherwise symmetrical design plus the cost effectiveness of adding lanes in the future (57,600 ADT in Design Year). Right of Way has already been acquired on the north side of the road, minimizing potential RW savings. The plans have been designed and there would be redesign cost that include all plan sheets as well as bridge and drainage redesign and recalculation of quantities. In addition, the proposed Management Let Date of June 19, 2009 does not allow adequate time for a redesign. Any shift in Let date will cause user delays.

The recommendation of the Road Design Office is: Not to implement this recommendation.

### Alternative M-1

Description: Replace Concrete Side Barrier (Wall 2) with MSE Wall

Cost Savings: \$62,752

**Response:** The VE team did not add coping at the top of the MSE wall which will be required. This adds \$250/linear foot thereby raising the cost of the wall above that of the Type 2C Side

Barrier shown in the plans.

The recommendation of the Road Design Office is: Not to implement this recommendation

### Alternative M-1

**Description:** Use Wall endbent on bent 1(see recommendation A-4)

Cost Savings: \$104,500

**Response:** Please see Response on Alternative A-4.

The recommendation of the Road Design Office is: Not to implement this recommendation.

### Alternative O-3

Description: Replace Concrete Side Barrier (Wall 3) with MSE Wall

Cost Savings: \$40,000

**Response:** This wall runs 12' high for roughly 100 feet with the bottom elevation and top elevation changing often. This means that special forms need to be made for the bottom and top thereby raising the cost and eliminating the savings of \$40,000. In addition to this the cost of redesign would also add a few thousand dollars.

The recommendation of the Road Design Office is: Not to implement this recommendation
